## Introduction to the L.A. Stats, 2016 Edition

This is a collection of business and economic indicators for the Los Angeles Five-County Area (Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties) and in most instances our neighbor to the south, San Diego County. A variety of public sources have been used in its preparation and all tables have a source citation.

For other economic information on Southern California and the State of California in general, please visit our publications page at <http://laedc.org/economic-research-analysis/laedc-reports/>.

## Notes on Sources

The employment tables in *L.A. Stats* present statistics from three major surveys: the Current Population Survey (CPS; or household survey), the Current Employment Statistics Survey (CES; or establishment survey), and the Quarterly Census of Employment and Wages (QCEW).

The CPS or household survey is released monthly and is used to represent the entire civilian non-institutional population. This survey reports the unemployment rate because it asks if the respondent is currently working, or if they are not, about their job-seeking intentions. The household survey includes agricultural workers, self-employed workers whose businesses are unincorporated, unpaid family workers, and private household workers among the employed. It counts people on unpaid leave among the unemployed.

The CES or establishment survey (also released monthly), collects data on employment, hours and earnings from a sample of nonagricultural business establishments. The sample establishments are drawn from private nonfarm businesses such as factories, offices, and stores, as well as from federal, state and local government entities. Employees on nonfarm payrolls are those who receive pay for any part of the reference pay period, including persons on paid leave. Persons are counted in each job they hold. In contrast, the household survey has no duplication of individuals, because individuals are counted only once, even if they hold more than one job. Additionally, the establishment survey is not limited by age, whereas the household survey is limited to workers 16 years of age and older.

The QCEW data series provides a near census (compared to the population samples used for the CPS and CES series) of quarterly and annual employment and wage information by six-digit NAICS industry at the national, state and county levels. As such, it is the most complete universe of monthly employment and quarterly wage information by detailed industry at the national, state, CMSA, MSA and county levels. The data are derived from the quarterly tax reports submitted to the Employment Development Department by California employers subject to state unemployment insurance laws and from federal agencies subject to unemployment compensation for federal employees (UCFE). The QCEW program produces a comprehensive tabulation of establishments, and employment and wage information for workers covered by California Unemployment insurance and UCFE. QCEW data is published six to seven months after the quarter it covers. Thus, while QCEW data is more comprehensive than the CPS and CES, it has a much greater time lag to release.

The three series can diverge for a variety of reasons, including multiple jobs per person, living and working in two different counties, and being self-employed. Therefore, they should not be compared directly for the purpose of inferring precise information from the divergence of the three series.

**How to cite information from L.A. Stats:** Nearly all the data in *L.A. Stats* come from sources other than the LAEDC. Please cite the data as they are cited in this publication.

\*Note: In 2007 there was a change in the industry classification codes for firms engaged in Internet publishing, broadcasting and web search.

From 1998 to 2006, ISP's, web search and data processing were covered under NAICS code 5181 and Internet publishing and broadcasting were under NAICS code 516.

In 2007, 5181 and 516 were consolidated under NAICS code 51913 but firms providing internet access via client supplied telecommunications equipment i.e. telephones or "dial-up" were reclassified to NAICS code 517919 "all other telecommunications." Therefore, one cannot directly compare 1998-2006 employment figures with 2007-2010 employment.

Source: California State Board of Equalization

In 2009, the California Board of Equalization converted the business codes of sales and use tax permit holders to North American Industry Classification System (NAICS) codes. As a result of the coding change, industry-level data for 2009 are not comparable to that of prior years (see table C-18b for prior years).
