Stasis Labs gets $5M for patient-friendly non-ICU vitals monitor

By **Jonah Comstock** | November 15, 2016

SHARE Share 37

Stasis Labs, a company endeavoring to reinvent the patient monitor for non-intensive care settings, has raised $5 million in a round led by RTP-HC, the healthcare arm of RTP Ventures. Wonder Ventures and Techstars Ventures also participated in the round. Stasis Labs was incubated at **the Cedars-Sinai Techstars accelerator**.

Stasis provides a full system for monitoring patients in the general wards of hospitals and in non-hospital care facilities. Home care is on their roadmap, but not for the near future. The platform includes off-the-shelf sensors, cloud-based monitoring that can send alerts to care team members, and an in-room patient monitor which is designed to be easily readable — even to patients and their families.

Stasis Labs: Taking care of patients outside ICU

By *J Vignesh*, ET Bureau | Updated: Feb 24, 2017, 12.54 AM IST

BENGALURU: Dinesh Seemakurty was a student at University of Southern California when he watched his grandfather die in a hospital in his home town Kakinada in 2012 because of poor medical care after he was transferred out of the intensive care unit (ICU).

Virtual reality is being used by hospitals to help people cope with pain

By Meeri Kim June 9

Despite being in and out of hospitals since the age of 16, one of Harmon Clarke's biggest fears is having an intravenous line inserted into his arm. The 34-year-old resident of Los Angeles has had more than 30 surgeries related to his Crohn's disease, but getting stuck with an IV needle has never gotten less stressful.
